If "Other," please explain nature of project:	
What is the research question being asked?	What are the favorable prognostic characteristics of long term (>5Year) survival after SRS and SBRT?
What is the background or rationale for the research question? (if needed, please attach as a separate page to application)	SRS and SBRT are used for mostly malignant tumors and sometimes for benign diseases. Patients who have survived 5 years are often considered cured. Also some side effects manifest many years after treatment. It would be worthwhile to understand the patient, tumor and treatment characteristics of long term survivors after SRS/SBRT not only to better select patients and tailor treatments but also to understand their long term side effects.
Patient Inclusion/Exclusion Criteria:	Patients with 5 years of follow-up
